

Case Western Reserve University Department of Physics
Research Experiences for Undergraduates
Summer 2010
General Information

Welcome to the Case Western Reserve University (Case) Summer Research Experience for Undergraduates (REU) website. This program is funded by the National Science Foundation Division of Materials Research with additional support from Case. Each student will be mentored by a physics faculty member on an individual research project designed especially for an undergraduate. In addition to being engaged in individual research within their own research groups, REU students will participate with Case summer undergraduate researchers in weekly seminars, professional skills development workshops, a workshop on ethical issues in science, end-of-the-summer poster and presentation symposia, and other professional and social networking activities for undergraduate summer researchers.

The ten-week research program begins May 24 and ends July 30. Participants must be available for the entire duration of the program. Each participating REU student will receive a \$4000 stipend, free on-campus housing, \$800 support for meals, and up to \$500 reimbursement of travel expenses.

All non-CWRU undergraduate students majoring in physics or a related field and interested in experiencing the research environment in the Case Department of Physics are encouraged to apply. Students from institutions that have limited research opportunities and students from groups traditionally underrepresented in science and engineering are especially encouraged to apply. As required by the NSF, participants must be citizens or permanent residents of the U.S.

The application deadline is **March 20**.

Applicants will be notified of their status by **April 6**.
